What was recovered

OTE DESIGNCRAFT REVIEW · RECOVERED SOURCES + RECONSTRUCTED TOOLS

12 distinct source PDFs, with 156 pages, and 12 IDML files were recovered from the supplied Drive archive.

The earlier custom prototype and its generated ZIP files were not recovered. Recipes and tools here are newly recreated.

Byte-identical PDFs are in originals/. Reading copies larger than 24 MiB were optimized for static hosting.

Actual horizontal logo artwork and the stacked masthead from the September cover are included.

104 recipes: 76 story layouts, 14 ads, six custom pieces, eight covers. Catalogue pages are schematic geometry.

Drive PDFs are mostly reusable page shells; published website PDFs contain the finished article pages.

Source: user-supplied archive and stock DesignCraft v0.4.0. No recovered prototype claim.

Using OTEManager and DesignCraft

OTE DESIGNCRAFT REVIEW · RECOVERED SOURCES + RECONSTRUCTED TOOLS

1. In Publications, select articles and images; choose Open selected in planner or download a DesignCraft ZIP.

2. Utilities opens the selection directly. The standalone review also accepts a ZIP import.

3. Choose one, two or three stories and their photo arrangement. Reserve custom pieces if required.

4. Edit frame size/leading, geometry, selected photographs, captions and crop. Upload custom/ad artwork.

5. Save issue pages and continuation chains, then Generate editable output on a configured OTE server.

6. Inspect preflight. Missing media, overset or unresolved references block final PDF/IDML; drafts retain full source.

Offline: download recipes/kit and use compile-template.py or compile-issue.py with the verified CLI and packaged fonts.

Issue JSON includes exact stored Markdown, original media bytes, captions and stable IDs. Missing media rejects export.

Source: user-supplied archive and stock DesignCraft v0.4.0. No recovered prototype claim.

Fonts, covers and the double truck

OTE DESIGNCRAFT REVIEW · RECOVERED SOURCES + RECONSTRUCTED TOOLS

The original PDFs preserve their rendered branding. New editable samples use licensed Source Sans 3 and Source Serif 4.

Salted and Helvetica Neue were subsequently supplied. Original2025 uses selected private fonts via --font-dir.

Cover form fields include date/year, volume/issue, headline, caption, photo and automatically derived article pages.

The double truck is continuous: 16 pages means 8/9. Preservation protects both halves and rejects intersecting thread edits.

A print-ready booklet requires a multiple-of-four page count. Several supplied 17-page issues are unfinished layouts.

Whole-issue preservation compares protected native spread objects and stories; supply a same-length native base.

All 104 recipes pass illustrative-copy preflight and three repeat cycles. The seven included native examples were regenerated.

Stock IDML drops numbering, text labels, parent overrides and URL links. Keep the checked sidecar; Adobe does not consume it.
